1. What is the prevalence of ADHD?
   A. 5%
   B. 6%
   C. 7%
   D. 8%

2. What is the most common and effective medication to treat ADHD?
   A. Risperidone
   B. Methylphenidate
   C. Amphetamine
   D. Both B and C

3. What are the most pronounced mild adverse events of using stimulants?
   A. Insomnia and headache
   B. Insomnia and increased heart rate
   C. Insomnia and reduced appetite
   D. Insomnia and agitation

4. How many patients participated in this clinical trial?
   A. 60
   B. 70
   C. 80
   D. 90

5. How many weeks the children received the treatment?
   A. 4
   B. 16
   C. 8
   D. 20

6. How many of the participants in group 1 were female?
   A. 21
   B. 8
   C. 10
   D. 16

7. How many patients were excluded from this clinical trial?
   A. 10
   B. 8
   C. 6
   D. 4

8. What was the age range (years) of the participants?
   A. 6-12
   B. 4-10
   C. 6-10
   D. 4-12

9. Which questionnaire was used in this clinical trial?
   A. Conners parent
   B. The council on nutrition appetite
   C. Wecksler
   D. Both A and B

10. How many questions are in the Conners parent questionnaire?
    A. 30
    B. 28
    C. 26
    D. 20
CME post test

11. Which condition was not considered as the exclusion criteria?
   A. Mental retardation
   B. Autism
   C. Thalassemia minor
   D. Obesity

12. Which statement is true?
   A. Folic acid improves appetite and results in significant change in weight gain
   B. Folic acid does not improve appetite, but results in significant change in weight gain
   C. Folic acid improves appetite, but does not result in significant change in weight gain
   D. Folic acid has no effect on appetite and weight gain

13. Which doses of methylphenidate and folic acid were given to group 1?
   A. 5 mg/kg and 5 mg
   B. 1 mg/kg and 1 mg
   C. 1 mg/kg and 5 mg
   D. 5 mg/kg and 1 mg

14. Which characteristic differed between the two groups?
   A. Weight
   B. BMI
   C. Conners parent scale
   D. Appetite score

15. Which characteristic was affected by time?
   A. Weight
   B. Height
   C. Conners parent scale
   D. BMI

16. How many references were used in this manuscript?
   A. 17
   B. 18
   C. 19
   D. 20

17. During which period this clinical trial was conducted?
   A. 2015-2016
   B. 2016-2017
   C. 2017-2018
   D. 2018-2019

18. According to the study by Ghanizadeh et al., which parameter was improved by folic acid?
   A. Quality of life
   B. ADHD symptoms
   C. Aggression
   D. None of the above

19. Which condition was considered as the inclusion criteria?
   A. Age between 4-12 years
   B. Non-use of other pharmacological treatments 2 weeks before the intervention
   C. The patient does not have any side effect with methylphenidate
   D. The patient does not have any organic disease

20. What was the schedule for patient visits in this clinical trial?
   A. 5 times every 2 weeks
   B. 5 times every 1 week
   C. 4 times every 2 weeks
   D. 4 times every 1 week
