Title: Association of HScore Parameters with Severe COVID-19: A Systematic Review and Meta-Analysis

Vol 46 No 5 September 2021

Learning objectives:

1. Describe HScore variables used to determine risk factors for hemophagocytic lymphohistiocytosis (HLH).
- 2- Describe the main HScore laboratory factors for severe COVID-19.
- 3- Differentiate HScore laboratory factors for severe COVID-19 from those of HLH.
- 4- Interpret HScore variables for both HLH and COVID-19.
- 5- Draw a parallel between COVID-19 and HLH.

Target groups:

Infectious disease physicians, Internists, Clinical laboratory scientists, Hematologists, Oncologists, Immunologists, Virologists, Bone marrow transplant specialists, Rheumatologists, Autoimmune disease specialists, Medical laboratory staff, Nurses working on COVID-19, Hematology, or Oncology wards
